

MOCHI'CLEAN

FACE CLEANSER

ABIC-5630C

OVERVIEW

Experience a unique quick-melting cleanser with a soft, semi-solid waxy texture that glides effortlessly onto the skin and melts instantly during application. Powered by high glycerin content, the formula spreads easily, creating a rich, creamy foam that cleans deeply while keeping skin comfortable and hydrated. Built with Amaze® XT and Elfan® AT 84 G, this gentle cleanser helps maintain the skin's natural moisture while delivering a smooth, luxurious feel. Structure® XL ensures the perfect texture and consistency, while Pink Clay Aquitaine Phytopowder 300 helps gently draw out impurities and refresh the skin without over-drying. Nutripeptides® adds an extra boost of nourishment, helping skin look healthier, softer, and more radiant.

Phase	Trade Name	Supplier	European I.N.C.I. Name	Function	%
A	Demineralized water	/	Aqua	/	20,05

OVERVIEW

Experience a unique quick-melting cleanser with a soft, semi-solid waxy texture that glides effortlessly onto the skin and melts instantly during application. Powered by high glycerin content, the formula spreads easily, creating a rich, creamy foam that cleans deeply while keeping skin comfortable and hydrated. Built with Amaze® XT and Elfan® AT 84 G, this gentle cleanser helps maintain the skin's natural moisture while delivering a smooth, luxurious feel. Structure® XL ensures the perfect texture and consistency, while Pink Clay Aquitaine Phytopowder 300 helps gently draw out impurities and refresh the skin without over-drying. Nutripeptides® adds an extra boost of nourishment, helping skin look healthier, softer, and more radiant.

PROCESS

PHASE A : Charge the main vessel with water and heat up to 80-85°C. Sift in Disodium Gluconate and dissolve it completely. Separately prepare a premix of Glycerin and Amaze® XT. Add it to phase A under a homogenizer and homogenize at 10000rpm for 5 minutes. Allow to rest for 10 minutes to facilitate hydration. Re-homogenize for an additional 2-5 minutes to ensure complete hydration. Place under stirrer and add the remaining phase A ingredients one by one under continuous stirring until uniformly mixed. Maintain the temperature at 80-85°C until all solid ingredients are fully melted and uniformly dispersed, then remove the heating and allow to cool down to 60°C.

PHASE B : Slowly sift Structure® XL into the batch under stirring and mix for 20 minutes at 800-1000rpm. Add the remaining phase B ingredients sequentially under continuous stirring. Ensure uniform dispersion and homogeneity after each addition.

PHASE C : Adjust pH with citric acid and add the remaining phase C ingredients one by one under continuous stirring. Continue mixing for 5-10 minutes to ensure complete incorporation and batch uniformity.

PROPERTIES

APPEARANCE : Purple waxy cleanser.

VISCOSITY : N/A.

pH : N/A.
